References

■ STATUS: TEMPLATE — NOT READY FOR SUBMISSION

Every contact-info field below is an explicit placeholder. No email address, phone number, or current institutional detail has been looked up, guessed, or invented — none of that information is available in the source CV or any other file in this workspace. **Fabian must personally contact each person, confirm they are willing to serve as a reference for this specific faculty search, and obtain their current, accurate contact details before this document goes anywhere near an application packet.** This is also standard academic practice independent of the contact-info gap: references are always asked for permission in advance, never listed cold.

---

1. Dr. Binata Joddar

Role relative to candidate: Doctoral dissertation advisor, Inspired Materials & Stem Cell-Based Tissue Engineering Lab (IMSTEL), The University of Texas at El Paso (2016–2020).

Affiliation: The University of Texas at El Paso — Department of Metallurgical, Materials & Biomedical Engineering *(confirm current title/department — may have changed since 2020)*.

Email: [EMAIL — Fabian to provide] **Phone:** [PHONE — Fabian to provide] **Current institutional affiliation:** [Confirm current institutional affiliation]

What this reference can speak to: Dr. Joddar directly supervised Fabian's PhD dissertation research ("Fabrication, Development, and Characterization of HiPCO SWCNT–Alginate Hydrogel Composites for Cellular Product Applications," UTEP, 2020) and is a co-author on his first-author 2019 *International Journal of Molecular Sciences* paper and the 2021 under-review manuscript on longitudinal stability of the SWCNT–alginate composite. As his direct research supervisor for four years, she is the strongest available source on his independent research capability, technical rigor (e.g., the zeta-potential/conductivity characterization work), and research potential — the core of what a faculty search committee needs from a primary reference.

Priority: Primary/required — the most obvious and defensible reference on the list.

---

2. Dr. Russell Chianelli

Role relative to candidate: Undergraduate research mentor, Materials Research & Technology Institute (MRTI), UTEP (May–Aug 2014).

Affiliation: The University of Texas at El Paso — Materials Research & Technology Institute *(confirm current title/status — this relationship dates to 2014; confirm he is still active/reachable at UTEP)*.

Email: [EMAIL — Fabian to provide] **Phone:** [PHONE — Fabian to provide] **Current institutional affiliation:** [Confirm current institutional affiliation]

What this reference can speak to: Fabian worked under Dr. Chianelli synthesizing and characterizing bismuth nanoparticles and contributed to manuscript preparation; he also independently proposed and designed a Co/Ni-promoted MoS■ catalyst project under this appointment (hydrodesulphurization of dibenzothiophene, XRD/SEM/TEM characterization). This is useful specifically because it documents self-directed proposal-writing and independent project design at the undergraduate stage — a different,

earlier data point on research initiative than the PhD work, from a different mentor and a different institute context.

Caveat: This was a single-summer appointment (~3 months), over a decade before this application. Fabian should honestly assess whether the relationship is current enough for Dr. Chianelli to write a substantive, specific letter, versus this being more of a "long track record of research interest" data point than a strong technical reference.

Priority: Secondary — include only if Fabian confirms Dr. Chianelli remembers the work well enough to speak to it specifically, not generically.

---

3. Dr. Roger Gonzalez

Role relative to candidate: Undergraduate research mentor, LIMBS International, UTEP (Jan–Aug 2012).

Affiliation: UTEP / LIMBS International *(confirm current title/affiliation — this relationship dates to 2012).*

Email: [EMAIL — Fabian to provide] **Phone:** [PHONE — Fabian to provide] **Current institutional affiliation:** [Confirm current institutional affiliation]

What this reference can speak to: Fabian conducted materials research under Dr. Gonzalez on low-cost, high-durability prosthetics for pediatric patients in low-resource settings, incorporating ethnographic, anthropometric, and biomechanical design considerations. This is the earliest documented research mentorship in the CV and speaks to translational/ human-centered design thinking and sustained interest in applied biomedical engineering predating even the undergraduate MRTI work.

Caveat: Same longevity concern as above, more acute — this was an 8-month appointment 14 years before the application date. This is the weakest of the three documented research mentors purely on recency grounds; Fabian should decide whether it adds meaningful breadth or should be dropped in favor of just Joddar + Chianelli (or a professional reference, below) if only 3 references are required.

Priority: Optional/tertiary — weakest recency profile of the three research mentors; include only if the search wants more than 3 references or if Fabian judges the relationship is still genuinely maintained.

---

4. Kevin Keel — current manager (CONFIRMED willing, per Fabian, 2026-08-26)

Role relative to candidate: Fabian's current manager, Amazon SAV4, BHN team (since ~May 2026). Previously referenced in workspace notes only as "Kevin" (first name, from internal Thrive documents); full name confirmed directly by Fabian.

Status: confirmed by Fabian as willing and able to give positive, substantive insights — this is the strongest-standing candidate in this document as of this pass, since every other entry is still "ask and hope," while this one is already a yes. Still needs real contact information before submission — confirmation of willingness is not the same as having a current email/phone on file.

Why this category matters: Fabian's research statement and mission/values framing lean explicitly on the Amazon role as evidence of operational rigor, quality-systems discipline (99.7% quality compliance), and people-leadership at scale (60+ associate team) — a differentiator relative to typical faculty

candidates. As Fabian's *current* manager, Kevin Keel can speak to this from the most recent and immediate vantage point.

Name: Kevin Keel **Title/role:** Manager, Amazon SAV4 (BHN team) *(confirm exact current title)*
Email: [EMAIL — Fabian to provide] **Phone:** [PHONE — Fabian to provide]

Priority: Primary Amazon/professional reference — confirmed willing, most current relationship.

4b. Alfred Brown — prior manager (alternate/backup professional reference)

Role relative to candidate: Operations Manager, Amazon SAV4 — completed/shared Fabian's Thrive performance reviews as his manager through at least October 2025 (documented in `Amazon_Role_Context.md` and `Amazon_Performance_Metrics.md`, sourced from Fabian's own internal Amazon Thrive/FORTE review documents — not from the academic CV).

Status relative to Kevin Keel: longer working relationship (through Oct 2025 vs. Kevin Keel's since ~May 2026), but not yet confirmed as asked/willing the way Kevin Keel has been. With a confirmed-willing current manager now available, Alfred Brown is best treated as a strong backup/4th reference rather than a required slot — use both if the search allows more than 3 references, or default to Kevin Keel alone for the professional-reference slot.

Name: Alfred Brown **Title/role:** Operations Manager, Amazon SAV4 *(confirm current title/whether still at SAV4)* **Email:** [EMAIL — Fabian to provide] **Phone:** [PHONE — Fabian to provide]

Priority: Backup/optional — only pursue if Fabian confirms willingness (not yet done, per this pass) and if the search wants more than 3 references.

---

5. (Uncertain — flagged for confirmation, not recommended without verification) Dr. Bharathi S. Gadad

Role relative to candidate: Possible PI/supervisor during the Neuropsychiatry Postdoctoral Fellowship, Texas Tech University Health Sciences Center El Paso (May–Nov 2022).

Why this is flagged, not asserted: The CV's Academic & Professional Appointments section does **not** name a supervisor or PI for the TTUHSCEP postdoctoral appointment — I read that section carefully and no name is given there. The only place Dr. Gadad's name appears is in the CV's Reconciliation Notes (§8) and the publication citation itself: she is listed as the final author on the 2023 *Frontiers in Psychiatry* paper arising from that postdoctoral appointment, and the CV's own notes speculate she was "senior/corresponding author." Final authorship on a paper from that period is a reasonable *inference* that she was Fabian's PI, but the CV does not state this explicitly as an employment/supervisory relationship, and the CV separately flags unresolved discrepancies about this appointment's end date. I am not confident enough in this inference to present her as a confirmed reference candidate.

Action required before using this entry at all: Fabian must confirm (a) whether Dr. Gadad was in fact his direct supervisor/PI for the postdoc appointment, not just a co-author, and (b) if so, whether the relationship supports a reference request given the ambiguity noted in the CV about how that appointment ended.

Email: [EMAIL — Fabian to provide, only if relationship is confirmed] **Phone:** [PHONE — Fabian to provide, only if relationship is confirmed] **Current institutional affiliation:** [Confirm current

institutional affiliation]

Priority: Do not include in the submitted reference list until Fabian confirms the supervisory relationship and Dr. Gadad's willingness. Listed here only so the option isn't lost, not as a ready candidate.

Recommended slate (pending Fabian's confirmation of willingness/contact info)

If exactly 3 references are needed, the strongest, most defensible combination from documented evidence is:

1. **Dr. Binata Joddar** — doctoral research supervisor, technical/research-potential reference.
2. **Kevin Keel** — current manager, confirmed willing (per Fabian, 2026-08-26); professional/operational-leadership reference, directly supports the "regulated-operations-at-scale" differentiator with the most current vantage point.
3. **Dr. Russell Chianelli** *or* **Dr. Roger Gonzalez** — second research-adjacent perspective; Fabian should pick whichever mentor he is confident will remember the work specifically and is comfortable writing a substantive letter given the age of the relationship.

If a 4th/5th reference is wanted or useful as backup, **Alfred Brown** (prior manager, longer relationship but not yet confirmed as asked) and the other of Chianelli/Gonzalez can be added, and Dr. Gadad only if the supervisory relationship is confirmed.

Required next steps before this can be submitted

1. **Ask each person directly** whether they are willing to serve as a reference for this specific faculty search — do this before listing anyone, not after.
2. **Obtain real, current contact information** (institutional email strongly preferred over personal email; direct phone line) directly from each person — do not source it from LinkedIn, old CVs, or guesswork.
3. **Confirm current titles/affiliations** — several of these relationships are years to over a decade old; titles and institutions may have changed.
4. **Resolve the Amazon manager identity** and the Dr. Gadad supervisory question (see §4–5 above) before finalizing the list.
5. **Replace every bracketed placeholder** in this document with verified real values, then remove the "TEMPLATE" status marker from the frontmatter.
