FABIAN ALVAREZ-PRIMO

OPERATIONS LEADER | MULTI-SITE TEAM LEADERSHIP | KPI & PROCESS EXCELLENCE

Savannah, GA · +1 (915) 603-2117 · fpalvarez23@gmail.com

Executive Summary

Operations leader with a track record building and running field-facing teams in high-volume, regulated, and technically demanding environments. Currently manages a **60+ associate operations team** at Amazon, sustaining **99.7% quality compliance** while owning staffing, scheduling, KPI reporting, and cost/process performance across a multi-function dock. Prior experience supervising a 9-person regulated laboratory team (CLIA/COLA) and coordinating multi-project lab operations brings additional depth in compliance-driven service delivery, technical team training, and vendor/equipment management. Brings hands-on project scheduling, resource allocation, budget discipline, and a builder's approach to standing up processes and KPIs where none existed — ready to apply that operational rigor to field service and project delivery in low voltage/electronic security operations.

Core Competencies

Multi-Site Team Leadership & Development	Project Scheduling & Resource Allocation	KPI Development & Performance Monitoring
Process Standardization & Continuous Improvement	Budget Management & Cost Control	Safety, Quality & Training Culture
Data Analysis & Reporting (Python, Sheets/Excel)	Cross-functional & Customer Escalation Management	Regulated/Compliance-Driven Operations (CLIA, COLA)

Professional Experience

Operations Manager II | Amazon | Savannah, GA | 2024 – Present

- Manage an operations team of **60+ associates** across a compressed 4-day schedule in a high-volume, multi-function fulfillment environment, sustaining **99.7% quality compliance**.
- Own staffing, scheduling, and resource allocation across shifts, using Python-based labor forecasting models to reduce scheduling variance and match headcount to project/volume demand.
- Established KPI dashboards and real-time performance monitoring across all operational metrics; drove an **82% improvement in dock rate (220 → 400+ units/hr)** and cut recirculation from **5% to below 2%** through data-driven staffing models and process standardization.
- Built the Vendor Returns operation from scratch — no prior operational structure existed at the site — including process design, staffing model, and standard work.
- Led cross-functional process improvement initiatives applying Lean methodology, identifying tooling gaps and independently engineering automation + analytics solutions that drove org-wide adoption.
- Developed and delivered technical team training programs; trained **15 Process Assistants** (up to 9 concurrently), building a structured development pipeline where none previously existed.
- Serve as an escalation point for operational issues across shifts and teams, coordinating with peer managers and support functions to resolve complex, time-sensitive problems.

Clinical Laboratory Scientist & Supervisor | West Texas Pain Institute (WTPI) | El Paso, TX | 2021 – 2022

- Supervised a **9-person** technical team operating a regulated Clinical Laboratory processing **1,300+ patient samples monthly**, owning scheduling, workload distribution, and performance standards.
- Ensured full **CLIA and COLA regulatory compliance** across all laboratory operations, including DHHS guideline adherence — direct experience running a service organization to a hard external compliance standard.
- Operated and maintained advanced analytical instrumentation (LC/MS, Enzyme Immunoassay platforms, DNA sequencing systems), including equipment maintenance scheduling and vendor coordination.

- Improved workflow through rigorous documentation, OSHA protocol enforcement, and process/software implementation — building standard operating procedures where none existed.

Post-doctoral Research Fellow | Texas Tech University Health Sciences Center (TTUHSCEP) | El Paso, TX | 2022 – 2023

- Directed a technical research project under regulated (cGMP-compliant) protocols, coordinating timelines and deliverables across neuroscience, clinical, and molecular biology teams.
- Managed biobanking operations — sample intake, processing, storage, and chain-of-custody documentation — a direct analog to service/asset tracking discipline.

Doctoral Research Assistant | Inspired Materials & Stem Cell Tissue Engineering Lab (IMSTEL), UTEP | El Paso, TX | 2017 – 2020

- Managed cross-functional lab operations — coordinating equipment schedules, procurement, SOPs, and data across **5+ concurrent projects** — akin to running parallel field/project workstreams.
- Mentored and trained **30+ undergraduate students** on technical equipment operation, developing structured onboarding curricula and hands-on training protocols.
- Achieved a **30% improvement** in equipment precision through hands-on hardware troubleshooting and modification.

Education

Ph.D. in Biomedical Materials Science & Engineering | The University of Texas at El Paso | 2016 – 2020

B.S. in Materials Engineering | The University of Texas at El Paso | 2010 – 2015
